

Basic influxdb setup instructions (osx)

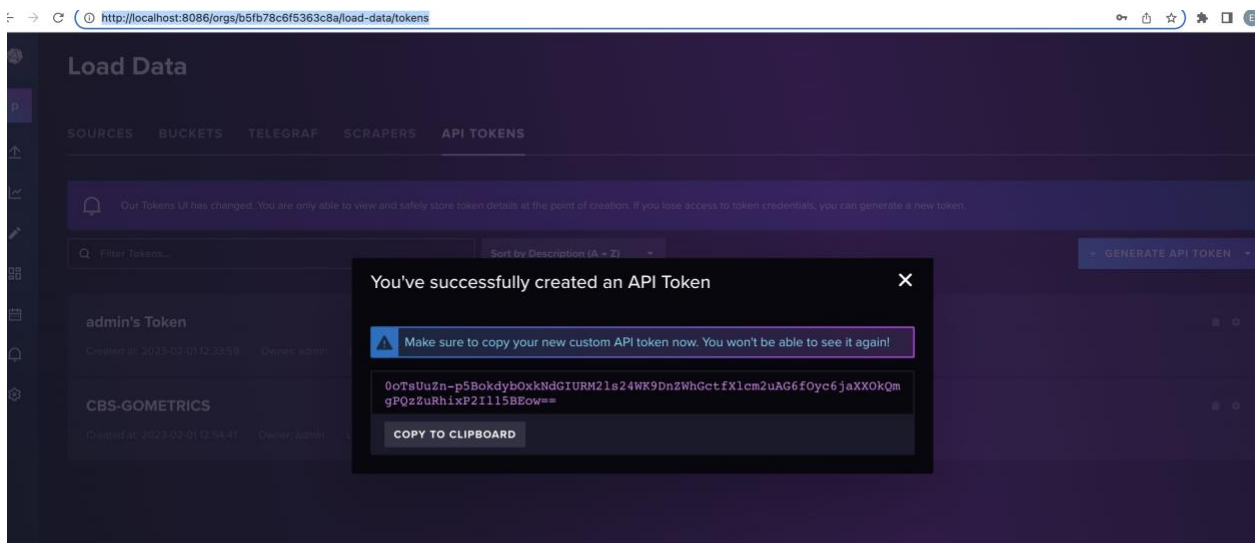

1. In terminal: `brew install influxdb`
2. In terminal: `brew services restart influxdb`

3.

The screenshot shows the 'Setup Initial User' form in the InfluxDB web interface. At the top, there are three progress indicators: 'Welcome' (green), 'Initial User Setup' (green), and 'Complete' (grey). The form title is 'Setup Initial User' with a subtitle 'You will be able to create additional Users, Buckets and Organizations later'. The form contains four input fields: 'Username' (pre-filled with 'admin'), 'Password' (masked with dots), 'Confirm Password' (masked with dots), and 'Initial Organization Name' (pre-filled with 'perf'). Below the password fields is a red error message: 'Password must be at least 8 characters'. Below the organization name field is another input field for 'Initial Bucket Name' (pre-filled with 'perf'). A blue 'CONTINUE' button is located at the bottom right of the form.

4. Generate token:
(<http://localhost:8086/orgs/b5fb78c6f5363c8a/load-data/tokens>)

6. Run locally from terminal: `while true; do; go run lyra.go ;`
`sleep 1; done;`
- 7.
8. Results:

```
gometrics - -zsh - 145x53
eelbaz@fll-mpuk3 gometrics % while true;do; go run gometrics.go;sleep 1; done;
